

## **Tints of Nature Semi-Permanent Colour**

Tints of Nature Semi-Permanent Colour is a highly effective conditioning hair colour. It's free from ammonia, PPDs, PTDs, parabens, peroxide and resorcinol, thus helping to ensure damage-free results. Certified organic wheat protein conditions your hair during the colouring process. An application should last 6-12 shampoos and can then be repeated.

Tints of Nature Semi-Permanent Colour is primarily designed for use on natural hair and is not recommended for use on hair that has been previously lightened more than one shade. If you have previously used a peroxide colour which has not lightened your hair, it is normally safe to use Tints of Nature Semi-Permanent Colour. However, as a precaution, remember to carry out the strand test prior to colouring.

### **Grey Coverage**

Tints of Nature Semi-Permanent Colour is not designed to give 100% grey coverage, but can cover up to 80% of grey hair. Maximise the coverage by applying gentle heat from a hairdryer for the first 10-15 minutes of the 30 minute development time.

### **Directions for Use**

An instruction leaflet is included in each box.

Always carry out a skin sensitivity test before you use Tints of Nature Semi-Permanent Hair Colours. We also recommend that you do a strand test before use.

### **Ingredients**

We use the most natural ingredients possible to create a highly effective product. Any synthetic raw materials are used only where there is no natural alternative. Our organic ingredients are certified by the Soil Association and ECOCERT.
